Maintenance Instructions for all Trimco Products

Trimco products do not require any maintenance except for cleaning.

Any products with working parts are lubricated permanently at the factory. We use a special lubrication product that is made especially for hardware items such as Trimco manufactures.

The cleaning instructions are very simple. Clean our products on a scheduled basis using just mild soap and water. Wipe with a soft cloth only.

Cleaning of Stainless Steel that has been exposed to a chemical or salt-water environment. (Remove any reddish/brown material that has built up on the material. You will need the following: a scotchbrite (green not blue) a container of WD-40 and some clean rags. Squirt the WD-40 into the scotchbrite. Rub the scotchbrite on the material in the same direction of the material. The fluid will begin to turn red. Remove all red material and wipe with a clean rag. Try and leave a thin coating of WD-40 on the material.

As a general rule, do not use anything that is abrasive such as scotchbrite, steel wool, sand paper, or any other abrasives. Please do not use any strong chemicals, such as chlorine bleach, kitchen or commercial cleaning products or anything other than a mild soap and water.

A thin coating of automotive wax any brand, (but those containing carnauba wax are best) may be used to protect all finishes except 613 (US10B)

Please remember that some finishes such as US10B and US10 are living finishes and will change in appearance over time. This change may be accelerated in geographical areas that have a salt or chemical (corrosive) environment.

Trimco's rubber items are protected for U.V., however, if they show wear or just aging, many of them are replaceable at a nominal cost. See our catalog and local sales agents for replacements for your particular item (s).

Please forward any questions regarding the continuing care of Trimco products to me at rverbeck@trimcobbw.com

Best Regards,
